METHOD OF SYNTHESIZING

FLUOROMETHYLHEXAFLUOROISOPROPYL ETHER

Inventors: Clifford L. Coon

Robert L. Simon

ABSTRACT OF THE DISCLOSURE

A method of synthesizing fluoromethylhexafluoro-isopropyl ether comprises adding hexafluoroisopropyl alcohol to a mixture comprising a stoichiometric excess of paraformaldehyde and hydrogen fluoride, plus sufficient sulfuric acid to sequester most of the water produced by the reaction. The mixture is maintained at a temperature of at least 57°C.,
²⁰ to cause vapor formation by boiling of the fluoromethylhexa-fluoroisopropyl ether formed. The vapor is then collected and condensed, and may be purified by distillation.
